

Cloud Connector Personal Edition

NEU

499 \$

Compatible with:

SharePoint 2013 and 2010
SharePoint Foundation
SharePoint Online

Features & Benefits

The Layer2 Cloud Connector for SharePoint 2010 / 2013 and Office 365 connects your external line-of-business data to Microsoft SharePoint:

- Extends the SharePoint capabilities to existing external data sets, that will continue to reside within your corporate network – directly connected to *native* SharePoint lists and libraries and always up-to-date.
- No programming or tools required: Setup in a few minutes guided by a wizard. No installation or customizing at SharePoint or data source required.
- 100% compatible to ALL SharePoint 2010 / 2013 offerings: On premise, externally hosted, Office 365, sandboxed. Utilizes the new Microsoft CSOM API.
- Reliable architecture: A connection is established only for data exchange – not for general usage. No direct access to corporate data required from outside. Native SharePoint lists and libraries act as a cache for your data – bidirectional if required.
- Secure data connection and transfer: The connector runs where your data resides today - on any server or client inside your corporate network with Internet connectivity available. No data is exposed to any 3rd party.
- High performance: Works great with large data sets.
- Almost any data source supported: ODBC, OLEDB, OData, .NET-based providers, file content (Excel, XML, CSV), File System Replication, SQL Server, Oracle, MySQL, IBM DB2, IBM AS/400, IBM Informix, Microsoft SharePoint, MS Dynamics NAV/CRM, Exchange, Active Directory, Navision, Lotus Notes, SAP, XML Web Services etc.
- CSOM, OData, File System, XML provider included.
- Start workflows or send email notifications in the cloud on external data change.
- Add additional “cloud-only” columns, e.g. for rating, or file attachments. Aggregate your external data.

“A data-integration strategy needs to be within the foundation of your cloud computing plan. This integration needs to be innate to the architecture; it can't be something you're reminded of at the rollout meeting...”

David Linthicum in *Cloud Computing*

Licensing & Partner Program

- FREE Shareware Edition available for download.
- Personal Edition: UD\$ 499 / 399 € per server.
- App Edition: (via SharePoint App Store only).
- Professional Edition: US\$ 1.407 / 995 € per server.
- Enterprise Edition: US\$ 6.360 / 4.999 € per server.
- Annual Software Assurance: 20% per year.
- Partner Program: 15-30% reseller discount on licenses, FREE NFR Edition, priority support, lead transfer.
